GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

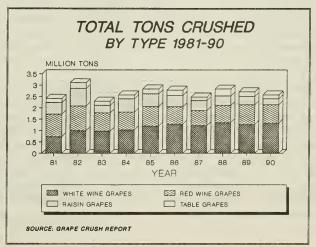

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1990 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1991. The March 11, 1991 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

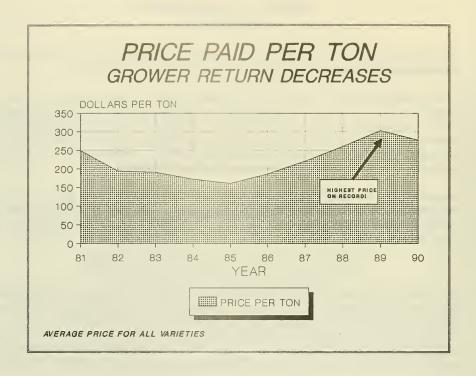

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1990 crush totaled 2,575,867 tons, down 5 percent from the 1989 crush and 17 percent less than the record-large 1982 harvest of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,330,697, up 5 percent from 1989. The 1990 red wine variety crush totaled 809,497 tons, down 7 percent from 1989. Tons crushed for raisin and table type varieties were down 27 percent and 20 percent, respectively from 1989. (See chart below.)

California grape growers received an average price of \$277.32 per ton for grapes crushed in 1990, down 8 percent from the 1989 record high average price. This is the first drop in average price for grapes crushed since the 1985 crop year. (See chart page 2.) These price levels were not adjusted for inflation.

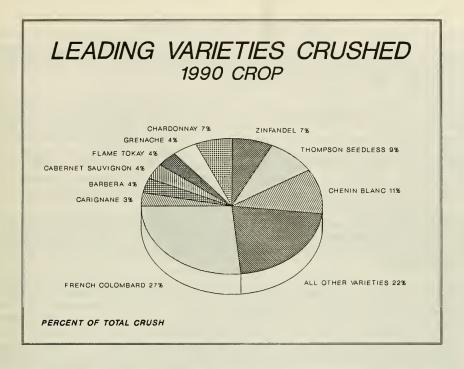

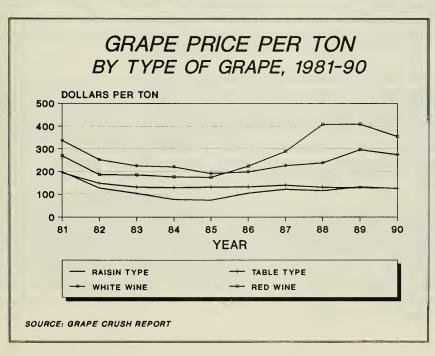

LEADING GRAPE VARIETIES AND DISTRICTS

French Colombard, the most widely planted wine grape variety in California, continued its dominance with approximately 27 percent of the crush volume. Chenin Blanc surpassed Thompson Seedless, a raisin variety grape, for second place with approximately 11 percent of the total crush. Thompson Seedless dropped to third place with approximately 9 percent of the total crush. The remaining top ten varieties were all wine varieties except the seventh largest -- Flame Tokay which falls into the table grape classification.

Grapes produced in District 4 (Napa County) received the highest average price of \$1,241.17 per ton, up 8 percent from 1989. District 3 (Sonoma and Marin counties) received the second highest return of \$976.96, up 5 percent from 1989. Of the grapes grown Statewide, four of the top five varieties receiving the highest average price were red type varieties. Petite Verdot received the highest average price of \$1,406.63 per ton followed by Cabernet Franc at \$1,298.91 per ton and Merlot at \$1,225.04 per ton. The 1990 Chardonnay price of \$1,129.52 was down 8 percent from last year, while the 1990 Cabernet Sauvignon price of \$989.93 was down 4 percent from last year. The average price for Zinfandel grapes continued to decline. This year's average price of \$388.35 was 29 percent lower than last year and 52 percent lower than the 1988 record high average price of \$817.48.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1990 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1989 are shown for comparison.

TABLE 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1990 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1989 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1990 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1989 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1990 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1989 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1990 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1989 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton</u>, <u>delivered basis</u>, <u>of all tonnage purchased for wine</u>, <u>concentrate</u>, <u>juice</u>, <u>vinegar</u>, <u>and beverage brandy</u> (TABLE 4) by California processors from the 1990 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1989 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1991 and include reference price contracts written prior to January 1, 1977 with final prices as of February 25, 1991. Weighted average prices also include any Brix adjustments, bonuses, or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

			Tota	l Grapes						Fina	Prices of Grapes	Purcha	sed fi	om G			
			Cri	ushed	Net				1			}			Actual Final Price Paid By		
			Over	Wtd.	Weight	1			1		Brix Adjustment	1			Winery to Grwr at Each Bas	e Paid	Wtd.
Variety		Dist	The	Ave.	Fresh		Total Brix		Accept			Brix	Adjust		Price and Brix Adjustment		Average
			Scale	0egrees	Tons		(Column 5 x				Brix Per Ton		Limit		Factor Including Bonuses o		Price
			Tons	Brix		Brix	Column 6)	Per Ton	Min.	Max.	Plus or Minus				Allowances. Dollars/Ton	(5 x B)	Per Ton
Column	-		3	4	5	6	A	7	8	9	10	12	13	14	B	; c	15
Zinfandel		,	100.0	20.1	100.0	20.1	2 010 00	s450 00	10 0	25 0	+ or - 10%	22.0	20 0	24 0	\$364,50	\$36,450,00	ì
EIMORDEE	_		100.0	1-40.,	100.0				17.0		- 01 102	1	100.0	24.0		1	•
Zinfandel		1	20.5	21.3	20.5	21.3	436.65	450.00	19.0	25.0	+ or - 10%	22.0	20.0	24.0	418.50	8,579.25	<u> </u>
Zinfandel		1_	10.6	23.5	10.6	23.5	249.10	450.00	19.0	25.0	+ or - 10%	22.0	20.0	24.0	517.50	5,485.50	<u> </u>
Combined		1	131.1	20.6	131.1	20.6	2,695.75	450.00	19.0	25.0	+ or - 10%	22.0	20.0	24.0		\$50,514,75	\$385,31

Columns 4 and 6 were obtained by dividing the total Net Fresh Tons, (Columns 3 and 5) into the total Brix of these same tons (Column A): $\frac{2,695.75}{131.1} = 20.6$

Column 15 was obtained by dividing the total Net Fresh Tons, (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31 131.1

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1990 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1989 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, percent of purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

a/ See code descriptions beginning on page 57.
 b/ Percentage total by variety will not necessarily add to 100.00 due to rounding.

d/ Price basis per degree Brix.

f/ All prices based on per degree Brix.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

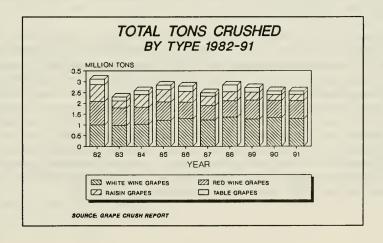

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1991 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1992. The March 10, 1992 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

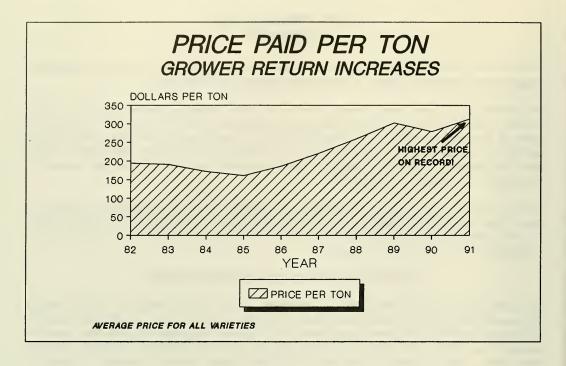

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1991 crush totaled 2,564,019 tons, down less than 1 percent from the 1990 crush and 18 percent less than the record-large 1982 harvest of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,285,400, down 3 percent from 1990. The 1991 red wine variety crush totaled 839,312 tons, up 4 percent from 1990. Tons crushed for raisin and table type varieties were up 6 percent and down 8 percent, respectively from 1990. (See chart below.)

California grape growers received an average price of \$313.49 per ton for grapes crushed in 1991, up 12 percent from the 1990 average price. The 1991 price was the highest on record -- surpassing the \$302.72 price paid in 1989. (See chart page 2.) These price levels were not adjusted for inflation.

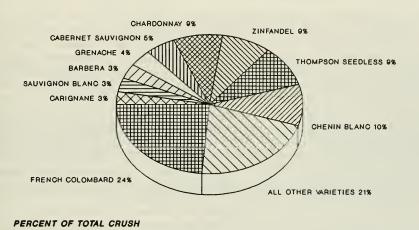

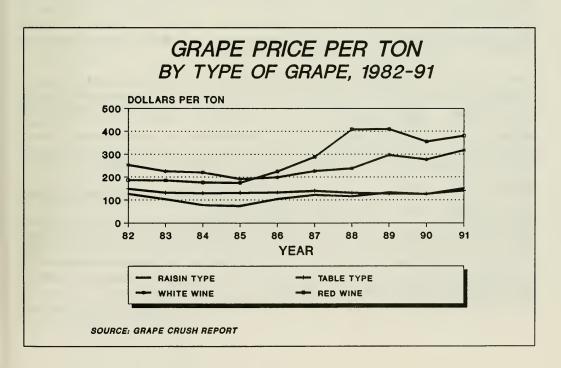

LEADING GRAPE VARIETIES AND DISTRICTS

French Colombard, the most widely planted wine grape variety in California, continued its dominance with approximately 24 percent of the crush volume. Chenin Blanc remained in second place with approximately 10 percent of the total crush. Thompson Seedless, a raisin variety grape, remained in third place with more than 9 percent of the total crush. The remaining top ten varieties were all wine varieties with Sauvignon Blanc entering the top ten with 3 percent of the total crush and Flame Tokay falling out of the top ten.

Grapes produced in District 4 (Napa County) received the highest average price of \$1,254.89 per ton, up 1 percent from 1990. District 3 (Sonoma and Marin counties) received the second highest return of \$989.03, up 1 percent from 1990. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all red type varieties. Malbec received the highest average price of \$1,529.88 per ton, up 327 percent from last year due to high average prices in District 3 and 4 this year. Petite Verdot received the second highest average price of \$1,413.21 per ton followed by Cabernet Franc at \$1,320.97 per ton, Merlot at \$1,175.90 per ton, and Cinsault at \$1,172.75. The 1991 Chardonnay price of \$1,119.30 was down 1 percent from last year, while the 1991 Cabernet Sauvignon price of \$917.00 was down 6 percent from last year. The average price for Zinfandel grapes continued to decline. This year's average price of \$359.31 was 8 percent lower than last year and 56 percent lower than the 1988 record high average price of \$817.48.

LEADING VARIETIES CRUSHED 1991 CROP

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1991 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1990 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1991 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1990 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1991 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1990 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1991 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1990 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1991 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1990 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton</u>, <u>delivered basis</u>, <u>of all tonnage purchased for wine</u>, <u>concentrate</u>, <u>juice</u>, <u>vinegar</u>, <u>and beverage brandy</u> (TABLE 4) by California processors from the 1991 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1990 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1992 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1992. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

IDEN	ITIFICAT	TION		Total	SECTION Grapes Co Your Faci	tA bedeur						rapes I	TION II. Purchased From Gro I, Vinegar And Bave		randy

0.00		1	2	3		Α	Α	в	A	7	8	8	10	11	12	12	14	16	С
Petite Sirah	1			166.6	20.6	3,203.3	100.0	20.1	2,010.0	450.0	19.0	25.0	+ or - 10%		22.0	20.0	25.0	364.50	36,450.00
Petite Sirah	1			20.5	19.0	389.6	20.5	19.0	389.50	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	418.50	8,579.28
Petite Sirah	1			10.6	23.5	249.1	10.8	23.5	249.10	460.0	19.0	26.0	+ or - 10%		22.0	20.0	24.0	517.50	5,485.50
Combined	1			186.6	20.6	3,841.9	131.1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	60,614,78

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3,841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2,648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 1991 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1990 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, percent of purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

a/ See code descriptions beginning on page 59.
 b/ Percentage total by variety will not necessarily add to 100.00 due to rounding.
 c/ Less than .005 percent.
 d/ Price basis per degree Brix.

e/ Price per degree Brix not included in weighted average base price. f/ All prices based on per degree Brix.

BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MGG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

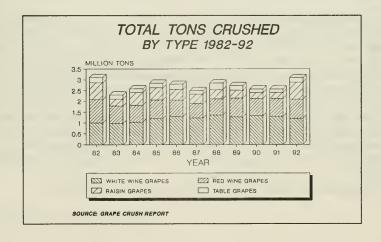

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1992 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1993. The March 10, 1993 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

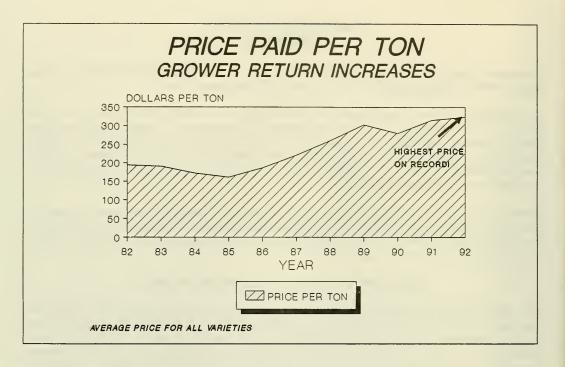

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1992 crush totaled 3,093,421 tons, up approximately 20 percent from the 1991 crush and only 1 percent less than the record-large 1982 crush of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,207,122, down 6 percent from 1991. The 1992 red wine variety crush totaled 885,318 tons, up 5 percent from 1991. Tons crushed for raisin type varieties were up a record 177 percent, while tons crushed for table type varieties were up 38 percent. (See chart below.)

California grape growers received an average price of \$323.78 per ton for grapes crushed in 1992, up 3 percent from the 1991 average price. This makes the 1992 price the highest on record. (See chart, page 2.) These price levels were not adjusted for inflation.

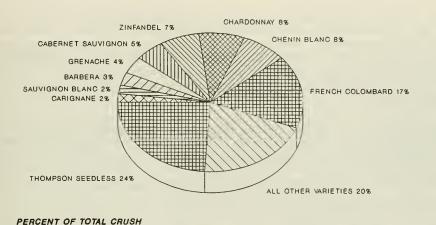

LEADING GRAPE VARIETIES AND DISTRICTS

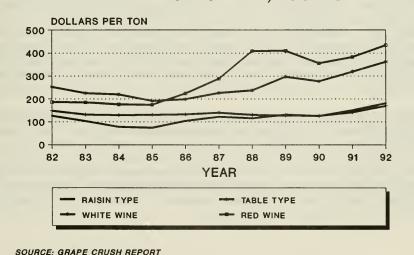

Thompson Seedless, a raisin grape variety, replaced French Colombard as the variety accounting for the largest percentage of crush volume, 24 percent. This is up 14 percentage points from 1991. French Colombard fell to second place with 17 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,211.76 per ton, down 4 percent from 1991. District 3 (Sonoma and Marin counties) received the second highest return of \$978.62, down 1 percent from 1991. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Petite Verdot received the highest average price of \$1,545.92 per ton, up 9 percent from last year. Cabernet Franc received the second highest average price of \$1,155.65 per ton followed by Pinot Gris at \$1,151.39 per ton, Flora at \$1,097.92 per ton, and Merlot at \$1,089.44. The 1992 Chardonnay price of \$1,033.68 was down 8 percent from last year, while the 1992 Cabernet Sauvignon price of \$869.13 was down 5 percent from last year. Breaking a downward trend, the 1992 average price for Zinfandel grapes rose to \$430.04, 18 percent higher than last year, but 47 percent lower than the 1988 record high average price of \$817.48.

GRAPE PRICE PER TON BY TYPE OF GRAPE, 1982-92

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1992 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1991 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1992 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1991 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the weighted average degrees Brix for all grapes crushed (TABLE 2) by California processors from the 1992 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1991 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1992 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1991 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1992 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1991 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1992 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1991 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1993 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1993. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

									DATA	AGE

Combined	1			186.6	20.8	3,841.9	131.1	20.2	2,648.8	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50,514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3,841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2,648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1992 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1991 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, percent of purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

a/ See code descriptions beginning on page 58.
 b/ Percentage total by variety will not necessarily add to 100.00 due to rounding.
 c/ Less than .005 percent.
 d/ Price basis per degree Brix.

Price per degree Brix not included in weighted average base price.

e/ Price per degree Brix not included in f/ All prices based on per degree Brix.

BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

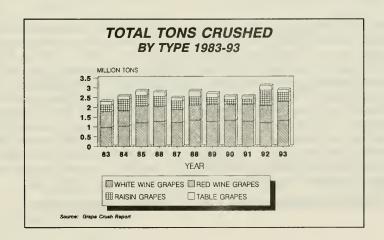

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1993 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1994. The March 10, 1994 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

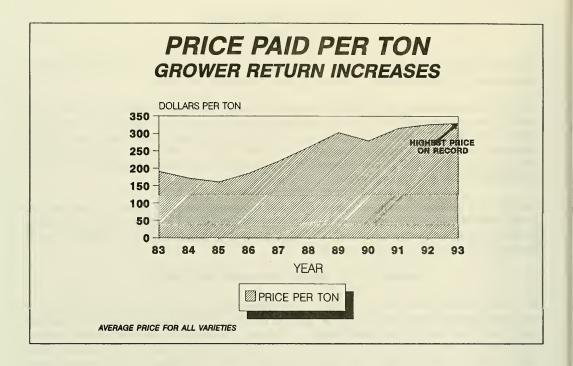

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1993 crush totaled 2,894,004 tons, down approximately 7 percent from the 1992 crush and 7 percent less than the record-large 1982 crush of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,326,510, up 10 percent from 1992. The 1993 red wine variety crush totaled 978,524 tons, up 10 percent from 1992. Tons crushed for raisin type varieties were down 42 percent from last year's record level of 784,910 tons, while tons crushed for table type varieties were down 37 percent. (See chart below.)

California grape growers received an average price of \$330.42 per ton for grapes crushed in 1993, up 1 percent from the 1992 average price. This makes the 1993 price the highest on record. (See chart, page 2.) These price levels were not adjusted for inflation.

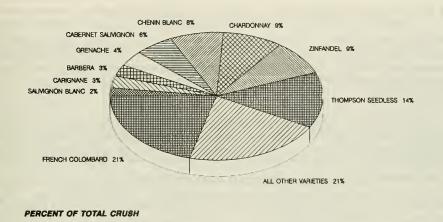

LEADING GRAPE VARIETIES AND DISTRICTS

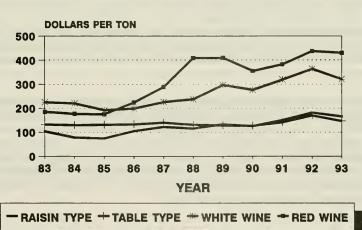

French Colombard, a white wine grape variety, regained its position from Thompson Seedless as the variety accounting for the largest percentage of crush volume, 21 percent. Thompson Seedless fell to second place with 14 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,174.72 per ton, down 4 percent from 1992. District 3 (Sonoma and Marin counties) received the second highest return of \$935.35, down 5 percent from 1992. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Petite Verdot received the highest average price of \$1,546.90 per ton, up less than 1 percent from last year. Pinot Gris received the second highest average price of \$1,156.08 per ton followed by Sangioveto/Sangiovese at \$1,099.27 per ton, Cabernet Franc at \$1,076.17 per ton, and Merlot at \$1,036.63. The 1993 Chardonnay price of \$905.50 was down 13 percent from last year, while the 1993 Cabernet Sauvignon price of \$806.91 was down 8 percent from last year. Continuing its upward movement from 1992, the 1993 average price for Zinfandel grapes rose to \$435.59, less than 1 percent higher than last year, but 47 percent lower than the 1988 record high average price of \$817.48.

GRAPE PRICE PER TONBY TYPE OF GRAPE, 1983-93

SOURCE: GRAPE CRUSH REPORT

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1993 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1992 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1993 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1992 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1993 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1992 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1993 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1992 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1993 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1992 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

De

Th

pe Bri

TABLE 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1993 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1992 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1994 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1994. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

		-							DATA	AGE									
IDEN	TIFICAT	TON			SECTION Grapes C Your Fac	rushed At						rapos F	TION II. Purchased From Gre , Vineger And Beve

Petite Sirah	1			10.9	23.6	249.1	10.9	23.6	249.10	450.0	19.0	26.0	+ or · 10%		22.0	20.0	24.0	617.60	5,495.50
Combined	1			186.6	20.6	3,841.9	131,1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	395.31	60,614.70

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3,841.9}{100.0} = 20.6$

186.6

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2,648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): $\frac{$50,514.75}{131.1} = 385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1993 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1992 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, percent of purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

a/ See code descriptions beginning on page 60.

Percentage total by variety will not necessarily add to 100.00 due to rounding. ₽/

Less than .005 percent.
Price basis per degree Brix.
Price per degree Brix not included in weighted average base price.

e/ Price per degree Brix not included in \overline{f} / All prices based on per degree Brix.

BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at tweighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

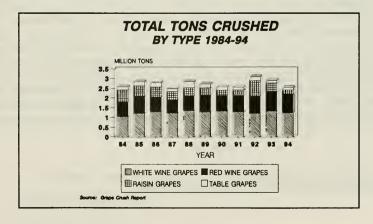

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1994 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1995. The March 10, 1995 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

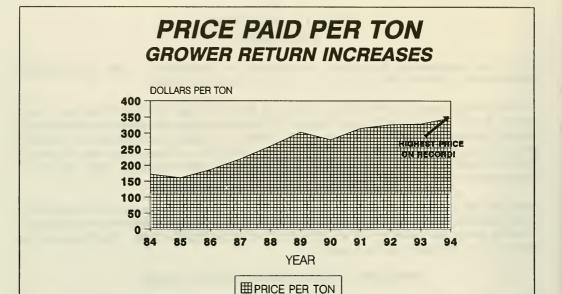

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1994 crush totaled 2,537,029 tons, down approximately 12 percent from the 1993 crush and 19 percent less than the record-large 1982 crush of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,240,807, down 6 percent from 1993. The 1994 red wine variety crush totaled 934,560 tons, down 5 percent from 1993. Tons crushed for raisin type varieties were down 70 percent from the 1992 record level of 784,910 tons, while tons crushed for table type varieties were down 10 percent from last year. (See chart below.)

California grape growers received an average price of \$347.90 per ton for grapes crushed in 1994, up 6 percent from the 1993 average price. This makes the 1994 price the highest on record. (See chart, page 2.) However, this was primarily due to the mix of varieties. Varietal prices were generally lower, except for Cabernet Sauvignon, Merlot, and Pinot Noir. These price levels were not adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

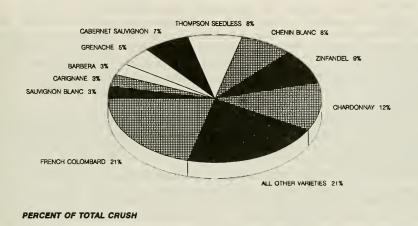

French Colombard, a white wine grape variety, continued its dominance with approximately 21 percent of the crush volume. Chardonnay was second place with 12 percent of the total crush. Nine of the remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,199.37 per ton, up 2 percent from 1993. District 3 (Sonoma and Marin counties) received the second highest return of \$980.48, up 5 percent from 1993. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Marsanne received the highest average price of \$1,552.23 1/per ton. Petite Verdot received the second highest average price of \$1,517.87 per ton followed by Mataro, at \$1,347.08 per ton, Rousanne at \$1,200.00 1/per ton, and Sangioveto/Sangiovese at \$1,147.44. The 1994 Chardonnay price of \$832.74 was down 6 percent from last year, while the 1994 Cabernet Sauvignon price of \$823.66 was up 3 percent from last year. Continuing its upward movement from 1993, the 1994 average price for Zinfandel grapes rose to \$459.70, 5 percent higher than last year, but 44 percent lower than the 1988 record high average price of \$817.48.

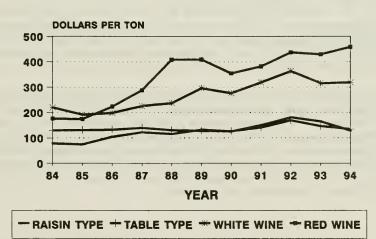

1/ These purchases involved a small amount of tonnage.

SOURCE: GRAPE CRUSH REPORT

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1994 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1993 are shown for comparison.

TABLE 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1994 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1993 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1994 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1993 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1994 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1993 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1994 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1993 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1994 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1993 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1995 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1995. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

100									DATA I	AGE		100							
					SECTION	11.						SECT	TON II.						
IDEN	TIFICAT	NOI			Grapes Cr Your Faci								Purchased From Gro , Vineger And Beve						
neme)	Dist.	Code	Line	Over The	Avg.		Purchesed		Total Brix (Cal. 5 X	Base Price	Accep Brix I			Office		Adjust Limits		Wtd. Avg.	Total Paid
	Where Grown			Tone .	Degrees Brix	Col. 4)	Tone Only	Brix	Col. 8)	Per Ton	Min.	Mex.	Degrees Brix Per Ton Plus & Minus		Bees	Min,	Max.	Price Per Ton	O-1 151
		10	2	3	4:	6	6	6	6	7	8		10	11	12	12	14	15	С

Petite Sireh	1			20.6	19.0	389.5	20.5	19.0	389.50	450.0	19.0	25.0	+ or - 10%	3 85	22.0	20.0	24.0	418.50	8,579.26
Petite Sireh	1			10.6	23.5	249.1	10.6	23.5	249.10	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	517.50	5,485.50
Combined	1			186.6	20.6	3,841.9	131,1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	60,614,78

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3.841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B):

2.648.6 = 20.2

131.1

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): $\frac{$50,514.75}{131.1} = 385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1994 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1993 are given for comparison.

TABLE 8 shows base prices paid to growers by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

a/ See code descriptions beginning on page 60.
b/ Price basis per degree Brix.
c/ Price per degree Brix not included in weighted average base price.

c/ Price per degree Brix not included in d/ All prices based on per degree Brix.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.
